George Heyman

The College of Applied Biology held its Annual General Meeting and Conference on April 5, 2019. The conference theme ("Right to Practice: What's the Future?") and panels addressed the important transition for applied biologists – and other resource management professionals – from the College of Applied Biology Act to the Professional Governance Act.

The audience reported its positive impression of the conference content, and the College was impressed by the information that was presented by each of the day's speakers. The panel conversation elicited excellent questions from the audience; the only negative feedback from attendees seemed to be that there simply wasn't enough time to answer all the questions posed.

In response, the College has been following up with speakers from the event in an effort to compile answers to some of the leftover questions. The speakers responded thoughtfully and the College has collected their answers [on its website for review](#). The speakers' insights are a useful resource for College members, other resource sector professionals, and the public alike.

The College will convene its next AGM and Conference on April 2-3, 2020 in Kelowna, BC.
